

BUILDING YOUR BUSINESS

Introducing Fleet Tech Manager from Solstice Transportation Consulting.

Your construction equipment may be located on job sites for weeks, months, or even years. Knowing that your vehicles are inspected before and after each service day is invaluable. Maintenance issues can be anticipated, and repairs scheduled to minimize work disruption and down time.

How Does Fleet Tech Manager Save You Money?

- Vehicles waste fuel when they idle too long, or travel inefficient routes. Estimates for fuel savings can be in the thousands or tens of thousands.
- Unsafe driving habits like speeding can result in fines or a greater likelihood of accidents. If your customers see your vehicles speeding or in areas they don't belong, it may result in lost business to your competition.
- Construction vehicles need constant inspection. They are worked hard and punished by stop and go driving, heavy loads, and drivers who are tough on them. By meeting your company's internal or regulatory inspection requirements, you'll reduce the risk of catastrophic maintenance failures.
- Maintenance management through technology can extend the life of your vehicle. One additional year of useful life can result in 20% savings to your bottom line. You'll reduce the maintenance costs 10%, 20%, or 30% through preventative procedures, and get more up time from the vehicles in your fleet.

Your investment in monitoring, tracking and responding to negative activities and trends will provide a direct ROI for your business. Solstice Transportation Consulting helps you build your business.

Fleet management made simple.™
