

DELIVER RESULTS FROM YOUR FLEET

Introducing Fleet Tech Manager from Solstice Transportation Consulting.

Delivering is the heart of your business. You depend on a reliable vehicle to get there and back safe and cost-effectively. Whether it's by car, van or truck, Solstice Transportation Consulting saves you money and time while providing the most reliable fleet reporting technology available today.

Delivery Fleets

Our focus is on companies that use trucks or vans to deliver product to residential, retail, commercial, or industrial customers. The target fleet size is anywhere from 1 to 250 vehicles. These operations are characterized by standard, predictable, and repetitive routes located within a fixed geographic area.

Features

- Identify drivers and vehicles that are in the wrong places or not in the right ones
- Identify drivers and vehicles that do not meet time performance expectations
- Identify unsafe vehicle operation, such as speeding
- Monitor vehicle inspection activity and ensure that it occurs with the right frequency and at the right locations
- Manage maintenance reporting activities to provide information and tracking for small issues that can easily mushroom into larger ones if ignored.

Solutions

We get in front of the issues. Identifying the behavior, trends, and activities that point to potentially expensive and disruptive outcomes. It becomes very clear to the owners and management that certain activity will have monumental consequences to the ability of the company to deliver.
